●Full Height Turnstile Catalogue

www.mairsturnstile.com

“The full height turnstile is a type of turnstile with an exterior structure that extends from the floor to the top of the head, providing extremely high safety. Unlike ordinary gates, full height turnstiles have three or two rows of rotating rods for entry and exit, similar to revolving doors, and are made of stainless steel material that can be used indoors and outdoors. Full height turnstile has good waterproof performance. At the same time, a waterproof design is also adopted inside the products, so that the full height turnstile can also show good functional characteristics in a harsh outdoor environment.”
