“Tripod turnstile gate is a kind of pedestrian access control turnstile gate that uses 3 rotatable rods to control the passage. When a pedestrian passes, the rods will automatically rotate and release the passage, and then automatically reset to prevent the next person from passing.

The rotating arms rotate 120 degrees each time. The tripod turnstile gate is the most basic and common pedestrian access control turnstile gate, which has 3 rotating arms that can be stopped or released by rotating 120 degrees each time.”
